

ASG SUPERCONDUCTORS COMPANY PROFILE

2018

www.asgsuperconductors.com

3 UNITS 1 COMPANY: FROM MATERIALS TO MARKET

ASG Superconductors is a leading Italian Company active worldwide in the **SUPERCONDUCTING** magnet and technology business for research and industrial applications

ASG has an average turnover of 50 M€/year consolidated and currently employs 230 highly specialized managers, engineers and technicians

Competences and ability to work with cutting edge technology and hitech materials is combined everyday with a strong commitment to increase production capability and technological skills, collaborating worldwide with the main scientific research institutes and with sector's market leaders.

ASG Superconductors is now organized in three operative units: magnets & systems unit, columbus mgb2 unit and paramed mri unit with 38,000 m² production over 4 plants in Liguria

THE RECENT MERGER HAS CREATED AN INDIVIDUAL COMPANY ABLE TO MASTER THE SUPERCONDUCTING TECHNOLOGY FROM THE MATERIAL SYNTHESIS TO THE COMMERCIALIZATION OF COMPLETE DEVICES

SOLID EXPERIENCE TO BUILD A BETTER FUTURE

ASG's history is that of an **EXCELLENCE AT THE FOREFRONT OF TECHNOLOGY**

From research to industrial applications: starting as early as the 1950s when the magnet unit of Ansaldo took part in the construction of the Italy's first electrosynchrotron in Frascati (Rome)

In 2001 the superconducting magnets division of Ansaldo spun-off as an independent company, increasing its effort significantly to become a sustainable market player, with a stronger inclination to develop new business opportunities by investing in promising materials including MgB₂ wires and in medical devices as MRI scanners

CERN, Fermilab, GSI, ITER - Fusion for Energy, CNAO and many more: ASG's history is a 50 years long legacy of facing and solving novel challenges presented by the scientific community

ASG ENGINEERS BELIEVE THAT IT IS NOW TIME TO BRING THEIR SUPERCONDUCTING TECHNOLOGY TO A HIGHER LEVEL, MAKING IT AVAILABLE FOR A COUNTLESS NUMBER OF ELECTROTECHNICAL DEVICES, WITH POSITIVE IMPLICATIONS ON A VARIETY OF ENERGY, MEDICAL AND INDUSTRIAL USES

SUPERCONDUCTORS, HISTORY MAGNETS AND MATERIALS

Superconductivity – even though discovered in 1911 – is one of the very few macroscopic evidence of quantum physics, and until today it is still largely unexploited at industrial level.

Superconducting materials allow for a truly "loss-less" transport of electrical currents when cooled to extremely cold temperatures. Today, superconductivity finds application mainly in the medical sector, both in diagnostics (MRI) and in therapy (proton irradiation of cancer).

Recent progresses of the cryogenic industry and in the superconducting materials processing are greatly simplifying the use of ASG technology, bringing it much closer to conventional devices.

ASG has developed a new superconducting material, whose chemical formula is MgB2, to manufacture superconducting wires through an industrial process. MgB2 distinguishes itself by the relatively high operating temperature, between 15 and 25K, the sole need of industry standards to synthesize it, and the processing through a rather conventional thermomechanical method into long, multifilamentary wires.

ASG ENGINEERS ARE FULLY ENGAGED IN THE RACE TO BRING SUPERCONDUCTIVITY CLOSER TO THE PEOPLE THAN IT IS TODAY, BY GENERATING, STORING, PROTECTING, AND FEEDING THE CLEAN ENERGY THEY NEED, BY IMPROVING THE MEDICAL TOOLS THEY MAY NEED DURING THEIR LIFE....

ENHANCE SYNERGIES TO UNLEASH GROWTH

WORKING TOGETHER TO SQUEEZE THE BEST OUT OF OUR TECHNOLOGIES

MAGNETS & SYSTEMS UNIT

With more than 50 years experience and with a vast and trusted global track record, the Magnets & Systems Unit designs, manufactures, and tests **SUPERCONDUCTING MAGNETS** and **SYSTEMS** for:

HIGH ENERGY PHYSICS EXPERIMENTS

MRI MAGNETS

CANCER THERAPY MAGNETS

POWER GRID DEVICES

Superconducting magnets in thermonuclear fusion are essentially employed to PRODUCE A STRONG MAGNETIC FIELD THAT LEVITATES AN EXTREMELY HOT PLASMA ROTATING IN A VACUUM CHAMBER

ASG has been proudly selected to supply superconducting MAGNETS TO ALL THE MOST IMPORTANT NUCLEAR FUSION INITIATIVES WORLDWIDE

In turn delivering magnet systems for

- **STELLARATOR**
- Токамак

And all orders of magnets:

- CENTRAL SOLENOID
- TOROIDAL FIELD COILS
- POLOIDAL FIELD COILS
- **DIVERTOR COILS**

THERMONUCLEAR FUSION

www.asgsuperconductors.com

Superconducting magnets are USED TO GUIDE AND FOCUS CHARGED PARTICLE BEAMS WITH A MINIMAL USE OF ENERGY. They are also used in detectors to allow the ANALYSIS OF THE OUTCOMES OF PARTICLE COLLISIONS

ASG has been engaged in supplying both LARGE SERIES PRODUCTION as well as ONE-OF-A-KIND MAGNETS for a variety of experiments globally

ASG is regularly IMPROVING ITS NUMERICAL MODELLING AND MANUFACTURING TOOLS to follow the progress of the superconducting technology and the increase in system performance that the high energy physics community is perpetually seeking

HIGH ENERGY PHYSICS

HEALTHCARE APPLICATIONS

MRI imaging devices are the MAIN DRIVER TODAY FOR THE SUPERCONDUCTING MAGNET BUSINESS, with several thousands of units sold globally per year

ASG has developed a number of MRI SOLUTIONS TO MEET SPECIFIC MRI MARKET DEMANDS, including HELIUM-FREE SYSTEMS, ULTRA-HIGH FIELD MAGNETS, IMAGE-GUIDED RADIATION THERAPY MAGNETS

ASG is making use of competences gained in High Energy Physics and Fusion and applying them to compact accelerators for cancer therapy with proton beams

ENERGY PROJECTS

Thanks to the negligible electrical resistance, superconductors make electrical devices MORE EFFICIENT, COMPACT, POWERFUL THAN CONVENTIONAL EQUIVALENTS.

To make their implementation in practice possible, at ASG we are developing technologies to MODEL AND MANUFACTURE ENERGY-RELATED SUPERCONDUCTING DEVICES, including FAULT CURRENT LIMITERS (SFCL), MAGNETIC ENERGY STORAGE (SMES), WIND AND WAVE GENERATORS

COLUMBUS MGB2 WIRE UNIT

Columbus MgB2 unit is a **WORLD LEADER IN CUTTING-EDGE MAGNESIUM DIBORIDE** (MgB₂) TECHNOLOGY and the transformation of this superconducting material into long, versatile and HIGHLY RELIABLE SUPERCONDUCTING WIRE.

MgB2 is one of the most recent solutions adopted by the superconductor industry, the high superconducting temperature (Tc= 40 K) means that MgB2-based systems can be cooled by modern cryocooling devices, without the costly, problematic and hazardous use of liquid helium.

MgB2 wire technology is already tested and used in energy, power, medical and high energy physics.

MGB2 WIRES FOR CABLES

MGB2 WIRES FOR MAGNETS

MGB2 WIRES FOR MRI

MGB2 CABLES

OUR MATERIAL INNOVATION: MGB2 – MAGNESIUM DIBORIDE

MgB₂ – a simple magnesium - boron alloy - has been recently discovered as a Superconductor.

It is potentially competitive over the present NbTi technology thanks to:

- HIGHER superconducting temperature
- Abundancy of its constituents
- Non-toxic
- CAPABILITY TO CARRY 1000X CURRENTS THAN COPPER through the same section

We have developed an INDUSTRIAL PROCESS TO PRODUCE MgB₂ INTO LONG, ROBUST AND VERSATILE WIRES

SIMPLIFIED OPERATION WITH MGB2

HIGHER TEMPERATURE OF MgB₂ > INNOVATIVE COOLING of devices, making it much more USER FRIENDLY

There is no need to use any expensive, hazardous liquid coolant to maintain MgB_2 IN OPERATING CONDITIONS

ONGOING PROJECTS

\emptyset 10 cm MgB₂ instead of \emptyset 1 m copper

120 kA MgB₂ cable

\varnothing 30 cm MgB2 HVDC 6.4 GW power cable

We do have sufficient MgB2 wire manufacturing capability and device design and construction to realize full-scale systems

INNOVATION ROADMAP THROUGH MGB_2

REDUCE LOSSES OF CONVENTIONAL SYSTEMS

CERN, DATA CENTERS, SMELTERS, MRI & THERAPY,..

POWER SCALE-UP OF CONVENTIONAL SYSTEMS

HVDC CABLES, 10MW+ WIND, HV FCL,...

INTRODUCE RADICALLY NEW DEVICES

IRONLESS MOTORS & GENERATORS, SMES, HEATERS, SEPARATORS, ELECTRIC AIRCRAFTS,..

HIGHER EFFICIENCY

REDUCED FOOTPRINT

REDUCED WEIGHT

PARAMED MRI UNIT

Paramed MRI unit designs and produces **OPEN MRI SYSTEMS** with unique features and benefits, providing **OUTSTANDING PERFORMANCE AND UNPARALLELED PATIENT COMFORT**.

The company's flagship product, the MROpen system, is the only superconductive MRI with a "totally open" magnet design, that allows Multi-position imaging including advanced weight-bearing and functional studies, besides providing the highest comfort for patients.

We work for:

PLEASANT PATIENT EXPERIENCE MORE EFFECTIVE HEALTHCARE

BETTER HEALTH

IMPROVING PEOPLE'S LIFE is our mission. We achieve this through INNOVATION, CREATIVITY AND PASSION.

PARAMED MRI UNIT

USA SUBSIDIARY IN CHICAGO

OPERATING IN 22 COUNTRIES

250 MRI UNITS INSTALLED WORLDWIDE

OUR MRI IN THE WORLD

MROPEN - THE MGB2 MRI SCANNER

MGB2 IS MOVING THE HORIZON OF IMAGING TECHNOLOGY

SMART

- Allows revolutionary "open sky" magnet design.
- Enables innovative clinical solutions in Imaging and Therapy.

• Intrinsically "Quench free".

- No Helium-related hazards
- and safety systems.Hassle free maintenance.

GREEN

- No Helium used.
- Friendly to the environment.
- Lower power consumption.
- Saving natural resources.

+**)** /

ADVANCED

- Optimizes Healthcare by providing
- innovative clinical solutions
- better patient outcomes
- cost saving across the entire care cycle.

MGB2 IS THE CORE TECHNOLOGY OF THE MROPEN SCANNER

THE WORLD'S ONLY 'OPEN SKY' UPRIGHT MRI SCANNER

WITH MgB₂SUPERCONDUCTIVE MAGNET TECHNOLOGY

TECHNOLOGY

Friendly to the environment. Quench-free safe operation. Lower power consumption. No use of natural resources.

MULTI-POSITION IMAGING

Perform MRI in the position of symptoms: standing, sitting, bending or lying down. Don't guess. Just see.

UPRIGHT IMAGING

Enables Upright MR Imaging of Spine and Joints in Weight Bearing Mode.

BEST MRI PATIENT EXPERIENCE

U-shaped design delivers unparalleled patient comfort. No barrier between the patient and the environment.

HIGHEST PATIENT ACCEPTANCE

Claustrophobic, anxious, larger, elderly or disabled patients, or those who are in pain, are able to undergo the examination easily.

SPECIAL STUDIES & RESEARCH

Greatest versatility enables special MRI studies and clinical research: from dynamic studies, to imaging athletes with extreme ranges of flexion of the Spine and Joints.
